QueueSmart Assignment 2: Required Screens Checklist **DUE BY 10/2**

==========
1. AUTHENTICATION (find a way to not need email/pass…)
==========
Login Screen
- Email + password fields
- Basic client-side validation
Owner: **Anaya S.**

Registration Screen (first thing user sees)
- Email (used as username)
- Password
- Client-side validation (required fields, email format, password length)
Owner: **Justin H.**

Alternatives maybe:
- Google OAuth (phone SMS as backup) - emailed prof about rn.

==========
2. USER SCREENS
==========
User Dashboard
- Overview of current queue status
- Active services available
- Notifications summary
Owner: **Anaya S.**

Join Queue Screen
- Select a service (mock data)
- View estimated wait time
- Join
- "Skip the Line?" expandable panel with bribe tiers (important, dif color scheme)
Owner: **Thu N.**

Queue Status Screen
- Current position in queue
- Estimated wait time
- Status updates (waiting / almost ready / ready)
- "Move Up" bribe panel (important) updates position + notifies skipped person
- Cancel Reservation action
Owner: **Justin H.**

History Screen / notification api.

- List of past queues joined
- Date, service name, outcome
- Bribed vs. Standard indicator

Owner: **Vincent T.**

==========

3. ADMINISTRATOR SCREENS (come after user stuff)

==========

Admin Dashboard

- List of services, current queue lengths, quick open/close actions

Owner:

Service Management Screen

- Create/edit services: name (max 100 chars), description, expected duration, priority level

Owner:

Queue Management Screen

- View queue for a selected service
- Reorder/remove users (UI only)
- Serve next user (UI simulation)

Owner:

==========

REQUIREMENTS (apply to all screens)

==========

- In-UI notifications for queue updates / status changes (in-app only, SMS will come later)
- Client-side validation everywhere: required fields, length limits, correct input types (email, number, date)
- Consistent with A1 design decisions
- Mock/static data is acceptable

==========

REPORT SECTIONS STILL NEEDED

==========

- GitHub repo link (1 pt)
- Design & methodology discussion changed since assignment 1? why/why not? (1 pt)
- Front-end tech stack + who worked on what screens (2 pts) Tech: React
- Screenshots of every screen above, clearly labeled (5 pts)
- Team contribution table (1 pt)
